Group: should not preset to any category (*please select option would be better*)

‘Jump to contingency’ does not make sense to a native speaker. It would make more sense to refer to the different phases of the task.

Before we start the task, we would like to ask you how often you shop online?

- ☐ several times a day  
☐ once a day  
☐ a few times a week  
☐ once a week  
☐ once a month or less  
☐ very rarely / not at all

Please include a space between the box and the answer option.

How much do you want to use None of these right now?

This slide makes no sense at all. If people do not use drugs (say none of these or other), they do not need to be ask a drug-related question.

Not at all ————— Very much

I also noticed that you include the name of the drug from the previous slide with a capital letter. That is not correct and looks odd to a British person. The only exception is LSD.

How much do you want to use Cocaine right now?
